

WebEyeAlert Command Center

Helps secure and monitor people, property and assets in security applications

WebEyeAlert's digital video recording and remote surveillance solutions integrate with analog and network IP cameras to help secure and monitor people, facilities and assets in a wide range of security applications.

WebEyeAlert's Command Center application unifies video from multiple video sources. Operating as a software-based virtual matrix switch, the application utilizes the network to display video in a customizable format that is designed to maximize the viewing real estate on the video monitor.

Regardless of geographic location, WebEyeAlert's Command Center adeptly unifies combinations of video from stand-alone IP cameras, as well as WebEyeAlert NVR+ video recorders, into a user-friendly format that makes it an ideal viewing application for centralized video monitoring and Command Center users.

Superior Technical Advantage

Running as an application on an industry standard Windows platform, WebEyeAlert's open architecture Command Center technology Optimizes video performance by utilizing push technology, which provides high video streaming frame rate performance.

Tailored Viewing Experience

From the displayed video directory tree, the current operational status of all network IP cameras and/or WebEyeAlert video recorders is clearly grouped and displayed. Using the mouse, you can drag cameras into one of the many defined multiplexed views for a tailored viewing experience. Once your view has been created, simply enter a name and save the created viewing profile into the video tree directory for instant recall anytime.

Dynamic Camera Control

Controlling PTZ cameras has never been so simple; you can select either the virtual software joystick, or attach a USB-hardware joystick for a traditional camera control feel.

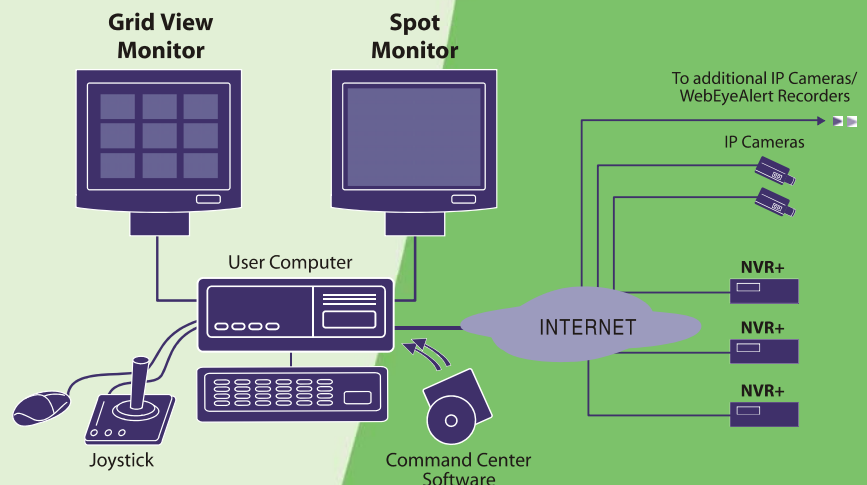

Regardless of your choice, you have the option to control PTZ cameras from within the multiplexed view, or, if you prefer a larger view, Simply select "Spot" monitor to send the video to a secondary monitor attached to your viewing station.

Breaks Geographic Barriers

With WebEyeAlert's Command Center you have a powerful application that will overcome the limiting barriers of analog matrix-switching systems.

KEY FEATURES:

- Large format display of video
- Unifies IP Cameras and WebEyeAlert recorders for centralized video monitoring applications
- Supports major brand IP cameras
- Utilizes high-performance video push technology
- Provides software & hardware PTZ camera control
- Supports dual monitor displays
- Includes customizable display views
- Enables drag-and-drop camera placement
- Displays camera & recorder operational status
- Converts a PC into a high performance "video matrix switch" and "multiplexer"

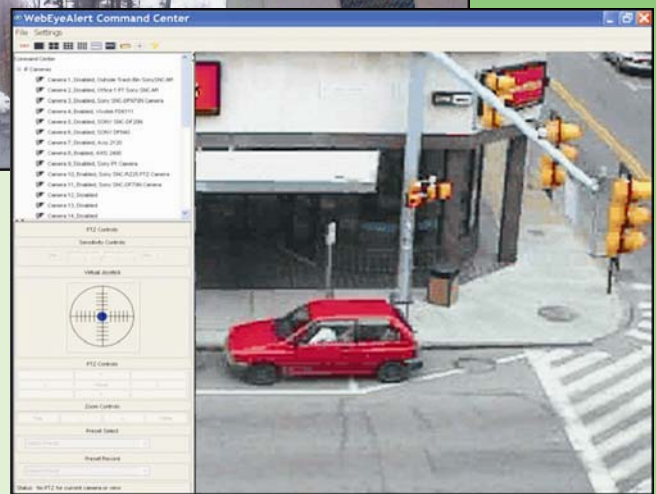

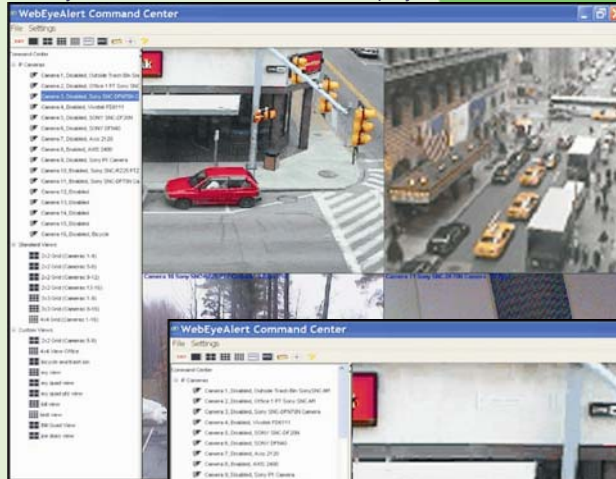

WebEyeAlert Command Center

Regardless of the geographic location of your cameras or personnel, Command Center offers an efficient and streamlined approach to unify and display video.

Unified Video Solution

WebEyeAlert's Command Center application plays a complementary role to our complete line of digital recording and remote surveillance solution. Other WebEyeAlert products that include remote access capabilities are the Embedded and Enterprise Web Server applications. Working in tandem with WebEyeAlert's video recorders, the web servers provide secure browser-based remote access, from which video can be viewed, and downloaded, cameras controlled and guest user accounts administered. In addition to the Embedded Web Server, which is included with all video recorders, the Enterprise version addresses requirements for multi-site unification, offsite storage, audit log, dynamic IP management, recorder monitoring and notification.

WebEyeAlert Command Center video display

WebEyeAlert Command Center Built-in PTZ Control

WebEyeAlert Product Family

NVR+ - supports IP video servers, 802.11 and network IP cameras

Web Server - unifies, displays, monitors, saves and administers multi-sourced video via a browser

Command Center - unifies, displays and customizes multi-sourced video for video monitoring applications
