GREAT SUCCESS for Aboundi's first 2009 PSA-TEC Exhibit

Aboundi's Innovative Electric Connect® and WebEyeAlert® solution demonstration during last week's 2009 PSA-TEC Conference at Pheasant Run Resort in St. Charles, IL offered hundreds of PSA-TEC attendees the opportunity to see and touch the new upcoming technology

We attended our first PSA-TEC conference and was most impressed with the quality of the attendees who have showed interest at our Booth #325: system designers, system integrators, project managers, technicians and potential industry partners.

We have introduced our Electric Connect® family of product to the PSA-TEC attendees which enable high speed Ethernet packets to traverse over many different transmission mediums: in-premise electrical wiring, voice grade twisted wires and long distance coaxial cables. This 'versatile wiring™' capability allows us the vast opportunities of solving many physical networking infrastructure connectivity deployment related problems cost effectively and can span across many market segments in applications. In a nut shell, any networking devices which connects with the RJ45 10/100 Mbps Ethernet port such as PC, POS, IP camera, monitor, serial control server and other peripheral devices can now utilize any copper wire as means of establishing networking applications.

The Electric Connect® solution became an instant attention grabber among attendees.

Why Electric Connect®?

Cost Saving & Time Saving & Easy & Lower the Total Cost of Deployment !

- No New Cable™!
- Turns electrical outlets, phone jacks, existing CATV F-Type outlets and expired CCTV cables into high-bandwidth local area networking infrastructure.
- Easy to extend the Ethernet connection beyond 100 meters.
- Easy to deploy - No need to drill holes and no business activity down time.
- No need to obtain Low Voltage cable installation permit.
- Eliminate oversight installation which may result in violation of Plenum cabling code requirements.
- Easy to use embedded diagnostic tool – Capable of providing Certificate of Performance for project acceptance.
- Easy to maintain. When the network breaks it is easy to find and identify the problem.

We have also demonstrated our WebEyeAlert®, an enterprise class open system camera brand name agnostic software platform comprised of three applications bundled into one easy to use and install solution ...

- NVR+ - network video recording application
- Web Server – remote server monitoring and access via browser
- Command Center – direct remote camera viewing

We are an Application Development Member of Axis Communications, a premier IP camera manufacturer. WebEyeAlert® also supports many other brand names and models of IP cameras, video encoders and etc. Please visit our web site for more detailed information.

Our Raffle winner at the PSA-TEC was Mr. Terry Rivet of Securitrionics from Syracuse, NY.

Congratulations, Terry!

About Aboundi Inc.

Aboundi, Inc. is the leading company providing POS/Retail/Hospitality, Small to Medium-sized Businesses (SMB), Multi-Dwelling Buildings (MDU), Municipalities and Enterprises with commercially advanced and yet cost effective deployment solution encompassing the existing/legacy copper wiring as their networking infrastructure. Our combined solutions of 'Electric Connect®' together with 'WebEyeAlert®', an open system IP based camera brand agnostic remote video surveillance monitoring and management software platform provide our customers unparalleled cost effective and yet powerful value propositions. www.aboundi.com
